

AZURE CLOUD COURSE

Curriculum

Module 1 : Introduction to Azure Data Factory

- Overview of Azure Data Factory (ADF) architecture
- Key components of ADF
- Use cases and scenarios for ADF
- Navigating the ADF user interface

Module 2 : ADF Data Movement and Transformation

- Configuring data pipelines in ADF
- Working with data flows for ETL processes
- Handling different data sources and sinks
- Implementing data transformations using ADF

Module 3 : ADF Orchestration and Management

- Designing and scheduling data pipelines
- Managing dependencies and triggering workflows
- Monitoring and troubleshooting pipeline executions

Module 4 : Introduction to Azure Databricks

- Overview of Azure Databricks as a unified analytics platform
- Key features and capabilities of Databricks
- Integration with Azure services

Module 5 : Working with Databricks Notebooks

- Creating and managing Databricks notebooks
- Writing and executing code in notebooks
- Collaborative features of Databricks notebooks

Module 6 : Databricks for Data Engineering

- Leveraging Databricks for big data processing
- Implementing ETL workflows in Databricks
- Integrating with Azure Data Factory
