

Ethical Hacking Beginner

jobzenter.in

90577 70577

Module 1: Introduction to Cybersecurity

- Overview: What is cybersecurity and why is it important?
- Ethical Hacking: Explain the role of ethical hackers in protecting systems and networks.
- Cyber Ethics: Discuss the ethical boundaries and legal aspects of hacking.

Module 2: Understanding Computers and Networks

- Basic Concepts: Introduce basic computer and network concepts, including how the internet works.
- Types of Networks: Differentiate between LAN, WAN, and the Internet.
- Safety Practices: Teach safe internet usage practices to protect against common risks.

Module 3: Creating a Safe Lab Environment

- Virtual Machines: Introduction to virtual environments using tools like VirtualBox.
- Setting Up a Safe Practice Area: Guide students on setting up a simple lab using safe and legal resources.

Module 4: Password Security

- Importance of Strong Passwords: Discuss how passwords protect information and the consequences of weak passwords.
- Creating Strong Passwords: Teach methods to create strong, memorable passwords.
- Hands-on Activity: Use online tools to test the strength of different passwords (in a controlled setting).

Module 5: Basic Reconnaissance

- What is Reconnaissance? Explain the concept of gathering information about potential targets without illegal intrusion.
- Google Searching Skills: Teach how to use search engines to find information responsibly.

Module 6: Phishing Awareness

- Understanding Phishing: Explain what phishing is and how it works.
Recognizing Phishing Attempts: Show examples of common phishing emails and websites.
- Hands-on Activity: Create a mock quiz to identify phishing emails or webpages.

Module 7: Introduction to Cryptography

- Basics of Cryptography: Introduce simple cryptographic methods like Caesar cipher.
- Encrypting and Decrypting Messages: Teach basic encryption techniques and their applications.
- Hands-on Activity: Encrypt and decrypt simple messages using online tools or Python scripts.

Module 8: Social Engineering and Phishing Attacks

- Antivirus Software: Explain what antivirus software is and why it is important.
- Firewalls: Describe what firewalls do and basic settings.
- Hands-on Activity: Demonstrate the use of basic security tools on personal devices.

Module 9: Introduction to Social Engineering

- What is Social Engineering? Explain the concept and how it can be used both ethically and unethically.
- Protecting Against Social Engineering: Discuss basic strategies to protect oneself from social engineering attacks.
- Role-Playing Exercise: Simulate a simple social engineering scenario in a controlled environment.

Capstone Project: Cybersecurity Poster Campaign

- Project Overview: Students create informational posters on a specific cybersecurity topic (like password security or phishing) to teach their peers about staying safe online.
- Presentation: Allow students to present their posters in class or a school-wide cybersecurity awareness event.
